

OHI Studio's Cozy Spatial Puzzle Game IYO Exits Early Access on December 4

[November, 2025, UK] Iyo will officially launch on December 4, 2025, on the Meta Horizon Store.

Evolving from its Early Access roots, this major update sees players guiding lost energy creatures home through a series of spatial puzzles. Iyo launches officially on December 4 for Quest 2, Quest 3, and Quest 3S.

Iyo has been transformed with new VR environments, characters, enhanced systems, and a reimagined progression flow designed to deliver a smoother, more engaging experience. Players explore vibrant VR worlds, merging lost floating energy creatures and guiding them home through interdimensional portals.

The original colourful orbs have evolved into a cast of cute, otherworldly beings called Iyos. Expelled from their distant universe during a cosmic cataclysm known as The Great Scattering, these creatures were dispersed across faraway galaxies. Only you can help get them home.

Iyos tactile merging mechanics now come alive with colorful characters that bounce playfully through reimagined VR environments. Each level presents a spatial puzzle: fill every portal space to capacity with no room to spare. Strategic merging and careful positioning are essential, as each Iyo grows larger when combined, and portals have strict capacity limits. One wrong move could send a creature through a portal prematurely, disrupting your carefully laid plans.

Coming Soon: Mixed reality support and improved hand tracking!

If you love cozy puzzle games and the satisfying joy of bouncing characters around in a relaxing VR setting, IYO is for you.

About OHI Studio

OHI Studio is an independent UK-based studio specialising in playful mixed reality and immersive content. The team creates innovative spatial experiences across VR, AR, and emerging wearable platforms.
